

BrowserStack Automate Jenkins Plugin

This plugin allows you to integrate your Selenium tests in [Jenkins](#) with [BrowserStack Automate](#).

Features

1. Set up and tear down [BrowserStack Local](#) for testing internal, dev or staging environments
2. Embed BrowserStack Automate Report in your Jenkins job results

Prerequisites

1. Minimum Jenkins version supported is 1.509
2. For viewing the BrowserStack Automate Report in your Jenkins job results, [JUnit plugin](#) must be installed

Installation

1. Download the [BrowserStack Automate plugin](#)
2. Go to **Manage Jenkins** > **Manage Plugins**
3. Click on the **Advanced** tab and in the **Upload Plugin** section, select and upload the plugin .hpi file
4. Once installed, please restart Jenkins for plugin installation to complete

Configuring tests

This step is required for viewing the BrowserStack Automate Report in your Jenkins job results. Currently, JUnit and TestNG maven based projects are supported. Add the following dependencies to your POM.xml file:

```
<dependency>
  <groupId>com.browserstack</groupId>
  <artifactId>automate-maven-plugin</artifactId>
  <version>0.2-SNAPSHOT</version>
</dependency>
<dependency>
  <groupId>org.aspectj</groupId>
  <artifactId>aspectjrt</artifactId>
  <version>1.7.4</version>
</dependency>
```

Add the following repositories to your **POM.xml** file:

```
<repositories>
  <repository>
    <id>sonatype-nexus-snapshots</id>
    <url>https://oss.sonatype.org/content/repositories/snapshots</url>
  </repository>
</repositories>

<pluginRepositories>
  <pluginRepository>
```

```

<id>sonatype-nexus-snapshots</id>
  <url>https://oss.sonatype.org/content/repositories/snapshots</url>
</pluginRepository>
</pluginRepositories>

```

Add the following plugin to your **POM.xml** file:

```

<build>
  <plugins>
    <plugin>
      <groupId>com.browserstack</groupId>
      <artifactId>automate-maven-plugin</artifactId>
      <version>0.2-SNAPSHOT</version>
      <executions>
        <execution>
          <goals>
            <goal>test-compile</goal>
          </goals>
        </execution>
      </executions>
    </plugin>
  </plugins>
</build>

```

Following environment variables are set by this plugin:

```

BROWSERSTACK_USER
BROWSERSTACK_ACCESSKEY
BROWSERSTACK_LOCAL
BROWSERSTACK_LOCAL_IDENTIFIER

```

You can use these environment variables to set **DesiredCapabilities** in your test. For e.g:

```

String username = System.getenv("BROWSERSTACK_USER");
String accessKey = System.getenv("BROWSERSTACK_ACCESSKEY");
String browserstackLocal = System.getenv("BROWSERSTACK_LOCAL");
String browserstackLocalIdentifier = System.getenv("BROWSERSTACK_LOCAL_IDENTIFIER");

```

```

DesiredCapabilities capabilities = new DesiredCapabilities();
capabilities.setCapability("os", "Windows");
capabilities.setCapability("browser", "chrome");
capabilities.setCapability("browserstack.local", browserstackLocal);
capabilities.setCapability("browserstack.localIdentifier", browserstackLocalIdentifier);
driver = new RemoteWebDriver(new URL("https://" + username + ":" + accessKey +
"@hub.browserstack.com/wd/hub"), capabilities);

```

Please see this [example](#) for more details.

Configuring Jenkins

Global Configuration

1. Go to Manage Jenkins > Configure System

2. In the BrowserStack Automate section set your BrowserStack username and access key. You can get these from your [BrowserStack settings page](#)
3. Save your changes

Job Configuration

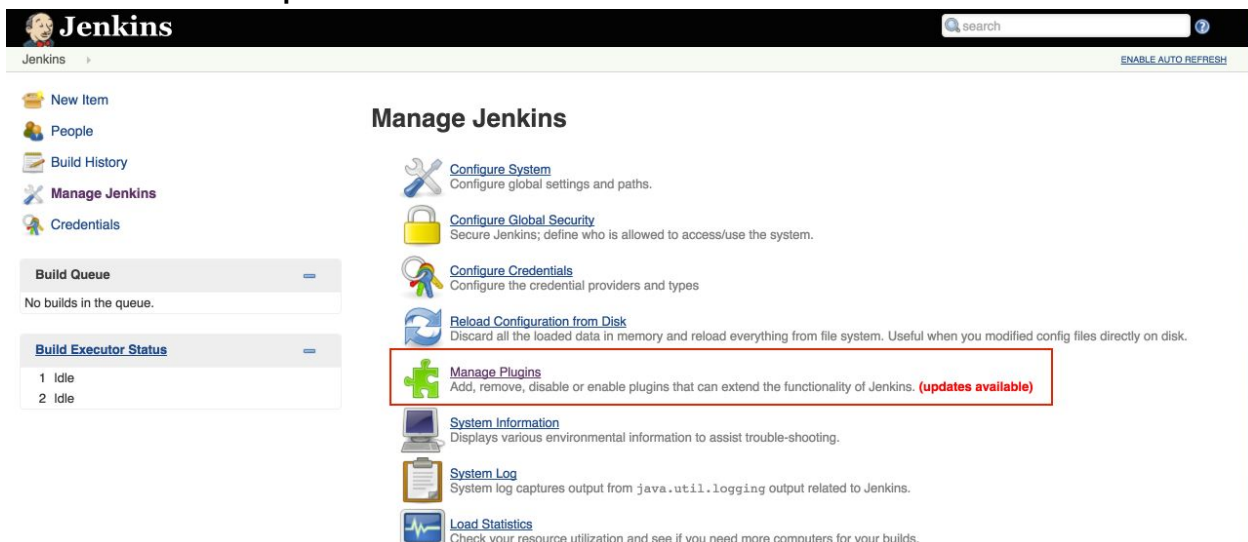

1. Create a new Jenkins job or configure an existing one
2. In the Build Environment section, select BrowserStack Automate
3. Select the credentials. By default, credentials set in Global Settings will be selected. You can override them if required
4. Select BrowserStack Local for testing staging/internal/dev/restricted environments on BrowserStack. You can also set the following options:
 1. **BrowserStack Local Path** - Alternate location to download and run the BrowserStack Local binary file
 2. **BrowserStack Local Options** - You can see the entire list of command line options [here](#)
5. In Post-build Actions section, select Publish JUnit test result report
6. Set the path for your report XMLs and select Embed BrowserStack Automate Report
7. Build your Jenkins job and in test results navigate to the testcase to view it's embedded BrowserStack Automate report
8. Save your changes

Limitations

1. *BrowserStack Automate Report* can only be embedded into your Jenkins job's results for JUnit and TestNG based projects
2. *BrowserStack Local* in Master-Slave setup is not currently supported

Screenshots

Installation Steps

The screenshot displays the Jenkins web interface, specifically the 'Manage Jenkins' page. The top navigation bar includes the Jenkins logo, a search bar, and a user profile icon. The left sidebar contains links for 'New Item', 'People', 'Build History', 'Manage Jenkins', and 'Credentials'. The main content area is titled 'Manage Jenkins' and lists several configuration options, each with an icon and a brief description:

- Configure System**: Configure global settings and paths.
- Configure Global Security**: Secure Jenkins; define who is allowed to access/use the system.
- Configure Credentials**: Configure the credential providers and types.
- Reload Configuration from Disk**: Discard all the loaded data in memory and reload everything from file system. Useful when you modified config files directly on disk.
- Manage Plugins**: Add, remove, disable or enable plugins that can extend the functionality of Jenkins. **(updates available)**
- System Information**: Displays various environmental information to assist trouble-shooting.
- System Log**: System log captures output from java.util.logging output related to Jenkins.
- Load Statistics**: Check your resource utilization and see if you need more computers for your builds.

On the left side of the main content area, there are two expandable sections: 'Build Queue' (showing 'No builds in the queue.') and 'Build Executor Status' (showing '1 Idle' and '2 Idle').

Post-build Actions

☐ Publish JUnit test result report

Test report XMLs: target/surefire-reports/TEST-*.xml

[Fileset 'includes'](#) setting that specifies the generated raw XML report files, such as 'myproject/target/test-reports/*.xml'. Basedir of the fileset is the workspace root.

☐ Retain long standard output/error

Health report amplification factor: 1.0
 1% failing tests scores as 99% health. 5% failing tests scores as 95% health

Additional test report features: ☐ Embed BrowserStack Automate Report
